

PRESS RELEASE

New energy contract pays solar panel owners a fixed feed-in tariff for three years, even when electricity prices are negative

Ghent, 30 September 2025 – A fixed feed-in tariff of 4 euro cents per kWh for three years, even when wholesale electricity prices go negative: these are the terms of a brand-new energy contract from EnergyVision. The country's fastest-growing energy supplier is first to market with this formula. Consumers in Flanders can sign up starting 1 October, with Brussels and Wallonia to follow. "Owners of solar panels and digital electricity meters should not be penalized for the success of solar power," the company states.

Will solar panel owners in the future always have to *pay* to inject excess power into the grid? Not if it's up to EnergyVision. The supplier is introducing a fixed-variable tariff with a guaranteed feed-in payment for the next three years, regardless of negative market prices. The launch is backed by the campaign 'Are You Crazy?!'

"Paying to feed your own energy back into the grid? People don't understand it, and rightly so. At EnergyVision, we embrace the sun—and we always will. Solar energy will never be worthless to us. On the contrary: it remains valuable and deserves fair compensation. What's more, our business model ensures that injected energy is supplied to people who cannot install solar panels themselves, allowing them to benefit from green power." Maarten Michielssens, CEO of EnergyVision

Solar energy is not worthless

Today, EnergyVision already guarantees consumers with a one-year contract that they will never pay to inject their surplus electricity into the grid. With this new formula, the company goes a step further: it offers additional security through a fixed feed-in tariff and a term that has no equal in the Belgian market.

"With our existing EnergyVision Cheap Power contract, consumers receive 1,000 kWh per year at a fixed rate of 9 euro cents/kWh (excl. VAT). The rest of their consumption is billed at variable rates. On top of that, we are now introducing a three-year energy contract in line with our philosophy of long-term certainty. The contract is transparent and comes without fine print: no indefinite terms, no possible tariff changes, and therefore complete security for the customer. Solar panel owners who choose this new contract are guaranteed a fixed feed-in tariff of 4 euro cents per kWh for three years." Maarten Michielssens, CEO of EnergyVision

The new contract will be rolled out in Flanders starting 1 October, with the rest of the country to follow.

About EnergyVision

EnergyVision is a fast-growing, integrated energy and mobility company, founded in 2014 and active in Belgium, China, and Morocco. The company accelerates the energy transition by offering solar energy and charging infrastructure without requiring customers or businesses to make upfront investments. At the same time, EnergyVision operates as an energy supplier, linking the output of its own solar panels directly to customer consumption. Customers benefit from lower energy bills, while excess solar power is supplied to other EnergyVision customers and charging stations. This way, renewable energy becomes widely accessible while keeping the electricity grid stable and reliable. Through this integrated approach—combined with smart, flexible, and data-driven management of its installations and network—EnergyVision achieves stable growth, technological innovation, and a positive climate impact, always with the customer and the energy transition at the core.
