Virya Energy further sharpens its focus: DATS 24 transfers energy supply to EnergyVision

DATS 24 keeps investing in growth. Fuel and EV charging remain the core activity. Continuity remains guaranteed for its 33,000 connections (18,000 clients).

Halle, July 30 - Virya Energy is transferring the retail electricity and gas supply activity of its subsidiary DATS 24 to EnergyVision, a carefully selected, specialised Belgian energy supplier. This concerns supply to the residential market representing approximately 33,000 access points (EANs) representing approximately 18,000 clients. Fuel and EV charging remain fully with DATS 24.

The proposed transfer is subject to customary conditions precedent.

With this step, Virya Energy concentrates on the activities where the group creates the most value: investing in assets for renewable energy generation, green hydrogen, renewable energy solutions for business customers, EV charging and DATS 24's mobility services. Retail electricity and gas supply is a limited activity within the portfolio; by transferring it to a specialist, the product can continue to grow while DATS 24 fully commits to the mobility of tomorrow and clearly opts for a growth path towards an extensive network of charging points.

EnergyVision is a 100% Belgian, listed energy company (Euronext Brussels), market leader in solar panels and the fastest-growing green energy supplier in the country. It supplies 100% green electricity as standard, largely from its own Belgian generation, with supply to end-customers as its core business.

For the customers concerned, the continuity of their supply does not change. Their contract, tariff and conditions are taken over one-to-one; customers need to do nothing and retain their legal right to free choice of supplier. They are informed directly, transparently and in good time, by both DATS 24 and EnergyVision.

Paul Tummers, CEO Virya Energy:

"This is a deliberate, forward-looking choice, not a step backwards. We are focusing our energy where Virya makes a difference: investing in assets for the generation of renewable energy, green hydrogen, electric charging and DATS 24's mobility services. Continuity remains guaranteed for our energy customers. We guarantee this: they will be carefully guided towards a strong, specialised supplier, whilst retaining all their existing terms and tariffs."

Jean-Jacques Delmée, CEO DATS 24:

"Our customers have consciously chosen DATS 24 over the past years, and that trust is not something we hand over lightly. In EnergyVision we chose a partner that shares our values: Belgian, green and customer-first. Our customers know they are in good hands, while we fully build the mobility of tomorrow: fuel and electric."

Maarten Michielssens, CEO EnergyVision:

“We warmly welcome the approximately 33,000 connection points (around 18,000 customers) of DATS 24. Their supply will continue without interruption and their existing conditions will remain unchanged. And at least as importantly: they are joining a supplier that treats its customers the way you treat your best friends: honestly, easy to reach and without hassle. With 100% green electricity and low prices, we are making the sustainable energy transition accessible to everyone.”

Meanwhile, the Belgian energy market is evolving rapidly. New regulations, the roll-out of smart meters and the emergence of dynamic tariff models are making the energy supply business increasingly complex: providing the best possible service to customers today requires specialised systems, scale and operational efficiency. Against this backdrop, a clear shift towards focus and specialisation is emerging in the market: energy supply is being concentrated among players for whom it is the core business, whilst other companies are focusing on what they do best. This transfer is part of that shift. DATS 24 customers will have a supplier that is entirely built around energy supply, with the scale and systems that tomorrow's market demands.

About DATS 24

DATS 24 is a Belgian mobility pioneer, with a dense network of fuel stations, a fast-growing offering of EV charging points. DATS 24 is part of Virya Energy.

About Virya Energy

Virya Energy, a Belgian pioneer in sustainable energy solutions, was founded in 2019 through the strategic partnership of Colruyt Group (30%) and Korys (70%), the Colruyt family investment holding. Operating across the full sustainable energy value chain, the company covers activities from development and construction to operation and distribution, with its distribution activities managed through its subsidiary DATS 24.

Virya Energy's portfolio encompasses strategic investments across wind and solar energy, sustainable hydrogen development, energy distribution, and specialized energy industry services. With over two decades of experience in onshore wind energy starting in 1999, a pioneering role in both offshore wind, between 2009 and 2023, and sustainable hydrogen, since 2012, Virya Energy has built extensive expertise in renewable energy development. With a team of over 700 members worldwide, Virya Energy operates in more than 15 countries across Europe and Asia. Virya Energy currently operates 0.7 GW of installed renewable capacity, of which 10% in Poland, and targets at least 4.3 GW globally by 2034. The company's "fit for purpose energy" strategy enables the delivery of tailored energy solutions from production to end-users, driving forward the acceleration of the energy transition and the development of innovative technologies.

About EnergyVision

EnergyVision (ENRGY, Euronext Brussels) is a fast-growing, integrated energy and mobility company, founded in 2014 and active in Belgium. The company makes the energy transition

more accessible and faster by offering solar, wind and hydropower, as well as charging infrastructure, for which customers and businesses do not need to make any investment. At the same time, EnergyVision acts as an energy supplier and links the production of its own solar panels and wind turbines to the consumption of its customers, who benefit from a reduced energy bill, while the remaining electricity generated is supplied by EnergyVision to other energy customers and its own charging points. In this way, sustainable energy becomes widely available and the electricity grid remains stable and reliable. Through this integrated approach, combined with smart, flexible and data-driven management of its own installations and the network, EnergyVision achieves stable growth, technological innovation and a positive impact on the climate, always with the customer and the energy transition as the starting point.
